A New Era of Hope: HLCC® Launches Groundbreaking New Growth Factors for Balding, Thinning, and Aging Hair and Skin

HLCC's revolutionary growth factors are developed with Nobel Prize-winning technology, and comprised of five 99.9% pure natural proteins that deliver proven and unprecedented improvements to balding, thinning, and aging hair and skin. Noticeable results have been reported in as little as two to six weeks, compared to several months with traditional formulas.

LATHAM, N.Y. (PRWEB) February 15, 2018 -- HLCC®, the global pioneer and leader in developing high-end anti-aging hair care products, has launched groundbreaking new growth factors for skin and hair — and ushered in a new era of hope for men and woman who want to fight back against the visible effects of aging.

HLCC's revolutionary growth factors are developed with Nobel Prize-winning technology, and comprised of five 99.9% pure natural proteins that deliver proven and unprecedented improvements to balding, thinning, and aging hair and skin. Noticeable results have been reported in as little as two to six weeks, compared to several months with traditional formulas.

HLCC's growth factors have been used safely and effectively for more than seven years in Australia, and over 500,000 individual use cases have been recorded internationally. All products all exclusively offered by HLCC, and not available from any other sources. The product line-up, which is now available for the first time ever in the U.S., Canada, and most other countries around the world, includes:

- Factor G6 - Professional Growth Factor Serum for Hair, which provides with 30,000ng/ml of growth factor proteins, and contains six specific types of growth factor proteins that are specifically bio-engineered to support the appearance of fuller, thicker, healthier looking hair.
- Factor G6 - Daily Hair Tonic, which provides 24,000ng/ml of growth factors with each application. Like the Professional Growth Factor Serum for Hair, it contains six specific types of growth factor proteins that are specifically bio engineered to support the appearance of fuller, thicker, healthier looking hair.

- da Vinci 21 - Professional Growth Factors for Skin, which provides with 24,000ng/ml of growth factor proteins, and is a powerful cosmetic “non-drug” alternative for more beautiful looking skin. Clients have reported smoother looking skin after just a few applications, with the appearance of fewer, smaller looking lines and wrinkles.
- da Vinci 10 - Daily Growth Factors for Skin, which provides with 10,000ng/ml of growth factor proteins, and contains five types of growth factor proteins that are specifically bio-engineered with liposomal technology for at-home use to fight against anti-aging and help with skin rejuvenation.

“My daughter has battled Alopecia Areata for many years, and after a large attack she lost a large portion of her hair,” commented Trichologist Patti Wood. “She used HLCC’s new growth factors, and experienced significant hair growth in just five weeks! To put this in proper perspective, other products that she’s tried in the past have taken five months to generate any noticeable results.”

“The results I’ve seen with growth factors have been amazing,” commented noted Dermatologist and Educator Dr. Ayyaz Shah. “To date, I’ve seen no other products that could give such significant results for hair and skin in such a short period of time.”

“This incredible technology provides dramatic improvement for individuals suffering from thinning, balding, and aging hair and skin in potentially as little as two weeks,” commented William C. Blatter, President of HLCC and Chairman of the [US Trichology Institute](#). “Leading edge specialists, estheticians, trichologists, and healthcare professionals are turning to these growth factors to amaze their clients, and profoundly improve their lives.”

Growth factors are protein molecules that are naturally produced by the body, and which stimulate cellular growth and function. They also regulate cell division and cell survival and bind to receptors on the cells' surface that activate cellular proliferation. These rejuvenating properties support a natural and safe process that aids in the improvement and appearance of thinning, balding, aging hair and skin.

There are different growth factors needed that are naturally produced by the body. Since they are required for healthy hair, they need a physiologically and balanced combination of these proteins and antioxidants. The growth factors offered by HLCC have been scientifically formulated with the necessary proteins and antioxidants that aid in the maintenance needed for a healthy hair follicle structure. More growth factors present in the hair follicle gives the appearance of more vibrant, fuller, thicker and youthful looking hair.

PRP has become very popular for hair and skin rejuvenation, similar to the method that Kim Kardashian promotes in her use of the Vampire facial®. A National Institute of Health [study](#) showed PRP can have up to 338% of the normal concentration of epidermal growth factor that would equal 429.26 ng/ml EGF growth factors. Healthcare professionals performing and offering the services of PRP can significantly reap the benefits of offering this post procedure solution in the use of these highly concentrated growth factors. In addition, the growth factors can significantly offer, enhance and fortify the body’s natural ability to stimulate collagen, for optimal repair and regeneration.
